

Nobels ODR-S clone

By Krister Östman

zeta-sound.se

The complete layout will fit in a 1590B hammond style box.

Note that C1 and C2 has to be small and in a low profile.

The project includes components mounted on the copper side of the board, and don't miss the jumper under the germanium diodes.

Finally all caps have 5mm spacing, except for some electrolytes.

Bypass switching has been omitted for true bypass.

This is a verified build, all though I have edited the layout to correct som errors I had.

Partlist

Part	Value	Part	Value	Part	Value	Part	Value
C1	470u	C15	1u	R3	33K	R17	3K3
C2	220u	C16	100n	R4	1M	R18	10K
